# **CERTIFICATE OF ANALYSIS**

Source: An E.coli strain that carries the cloned Fok I gene from Flavobacterium okeanokoites.

#### Supplied in: 10 mM Tris-HCl (pH 7.5), 50 mM NaCl, 0.1 mM EDTA, 1 mM DTT, 200 µg/ml BSA, 50% glycerol.

Reaction Conditions: 1X SE-Buffer Y. Incubate at 37° C.

1X SE-Buffer Y (pH 7.9 @ 25° C): 33 mM Tris-Ac 66 mM KAc 1 mM DTT 10 mM MaAc

### Heat Inactivation:

Enzyme is inactivated by incubation at 65°C for 20 minutes.

### Unit Definition: One unit is defined as the amount of enzyme required to digest 1 µg of Lambda DNA in 1 hour at 37°C in a total reaction volume of 50 µl. Overdigestions of > 5 units of Fok I per 1µg of DNA and incubations > 2 hours are not recommended.

## **Quality Control Assays**

Ligation: After 2-fold overdigestion with Fbl I, ~95% of the DNA fragments can be ligated and recut.

16-Hour Incubation: A 50 µl reaction containing 1 µg of DNA and 1 Units of enzyme incubated for 16 hours resulted in the same pattern of DNA bands as a reaction incubated for 1 hour.

Oligonucleotide Assay:No detectable degradation of a single-stranded and double-stranded oligonucleotide was observed after incubation with 1 units of restriction endonuclease for 3 hours.

#### **Enzyme Properties:**

When using a buffer other than the optimal (Supplied) SE-Buffer, it may be necessary to add more enzymes to achieve complete digestion.

**Reagents Supplied with Enzyme:** 10X SE Buffer Y.
