CERTIFICATE OF ANALYSIS

Source: *An E.coli strain that carries the cloned EcoR I gene from Escherichia coli.*

Supplied in:
10 mM Tris-HCl (pH 7.5), 200 mM NaCl, 0.1 mM EDTA, 7 mM 2-mercaptoethanol, 100 µg/ml BSA, 50% glycerol.

Reaction Conditions:
1× SE-Buffer EcoR I, BSA (100 µg/ml). Incubate at 37° C.

1X SE-Buffer EcoR I(pH 7.6 @ 25° C):
10 mM Tris-HCl 50mM NaCl
10 mM $MgCl_2$ 1 mM DTT

Heat Inactivation:
Enzyme is inactivated by incubation at 65°C for 20 minutes.

Unit Definition:One unit is defined as the amount of enzyme required to digest 1 µg of Lambda DNA in 1 hour at 37° C in a total reaction volume of 50 µl.
To obtain 100% activity, BSA should be added to the 1 x reaction mix to a final concentration of 100 µg/ml.
High enzyme concentration and using of nonoptimal buffer may result in star activity.
Do not use BSA for long incubation.

Quality Control Assays
Ligation:After 40-fold overdigestion with EcoR I, ~95% of the DNA fragments can be ligated and recut.

16-Hour Incubation:A 50 µl reaction containing in 1 µg of DNA and 40 Units of enzyme incubated for 16 hours resulted in the same pattern of DNA bands as a reaction incubated for 1 hour.

Oligonucleotide Assay:No detectable degradation of a single-stranded and double-stranded oligonucleotide was observed after incubation with 20 units of restriction endonuclease for 3 hours.

Enzyme Properties:
When using a buffer other than the optimal (Supplied) SE-Buffer, it may be necessary to add more enzymes to achieve complete digestion.

Reagents Supplied with Enzyme:
10X SE Buffer EcoR I, BSA (10 mg/ml).
